Agentic AI Orchestration
for Business

Speaker name
Designation
IBM

Generative AI
can unlock distinct
value across
use cases

Customer service

40% increase in
customer engagement
across all platforms

Human Resources

Reduced the Talent
transactional team’s
workload by up to 80%

IT

Reduced support
from helpdesk
personnel to zero

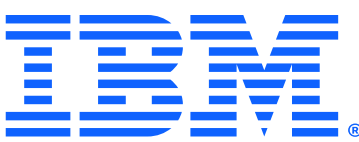

\$3.5+ billion saved

Human Resources

75%

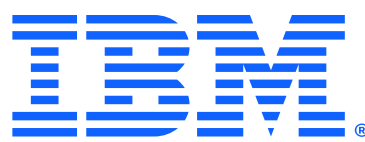

improvement in HR
productivity with over
12 AI solutions

Sales

83%

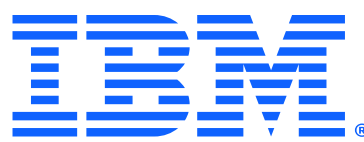

improvement in
time to resolve
sales inquiries

Procurement

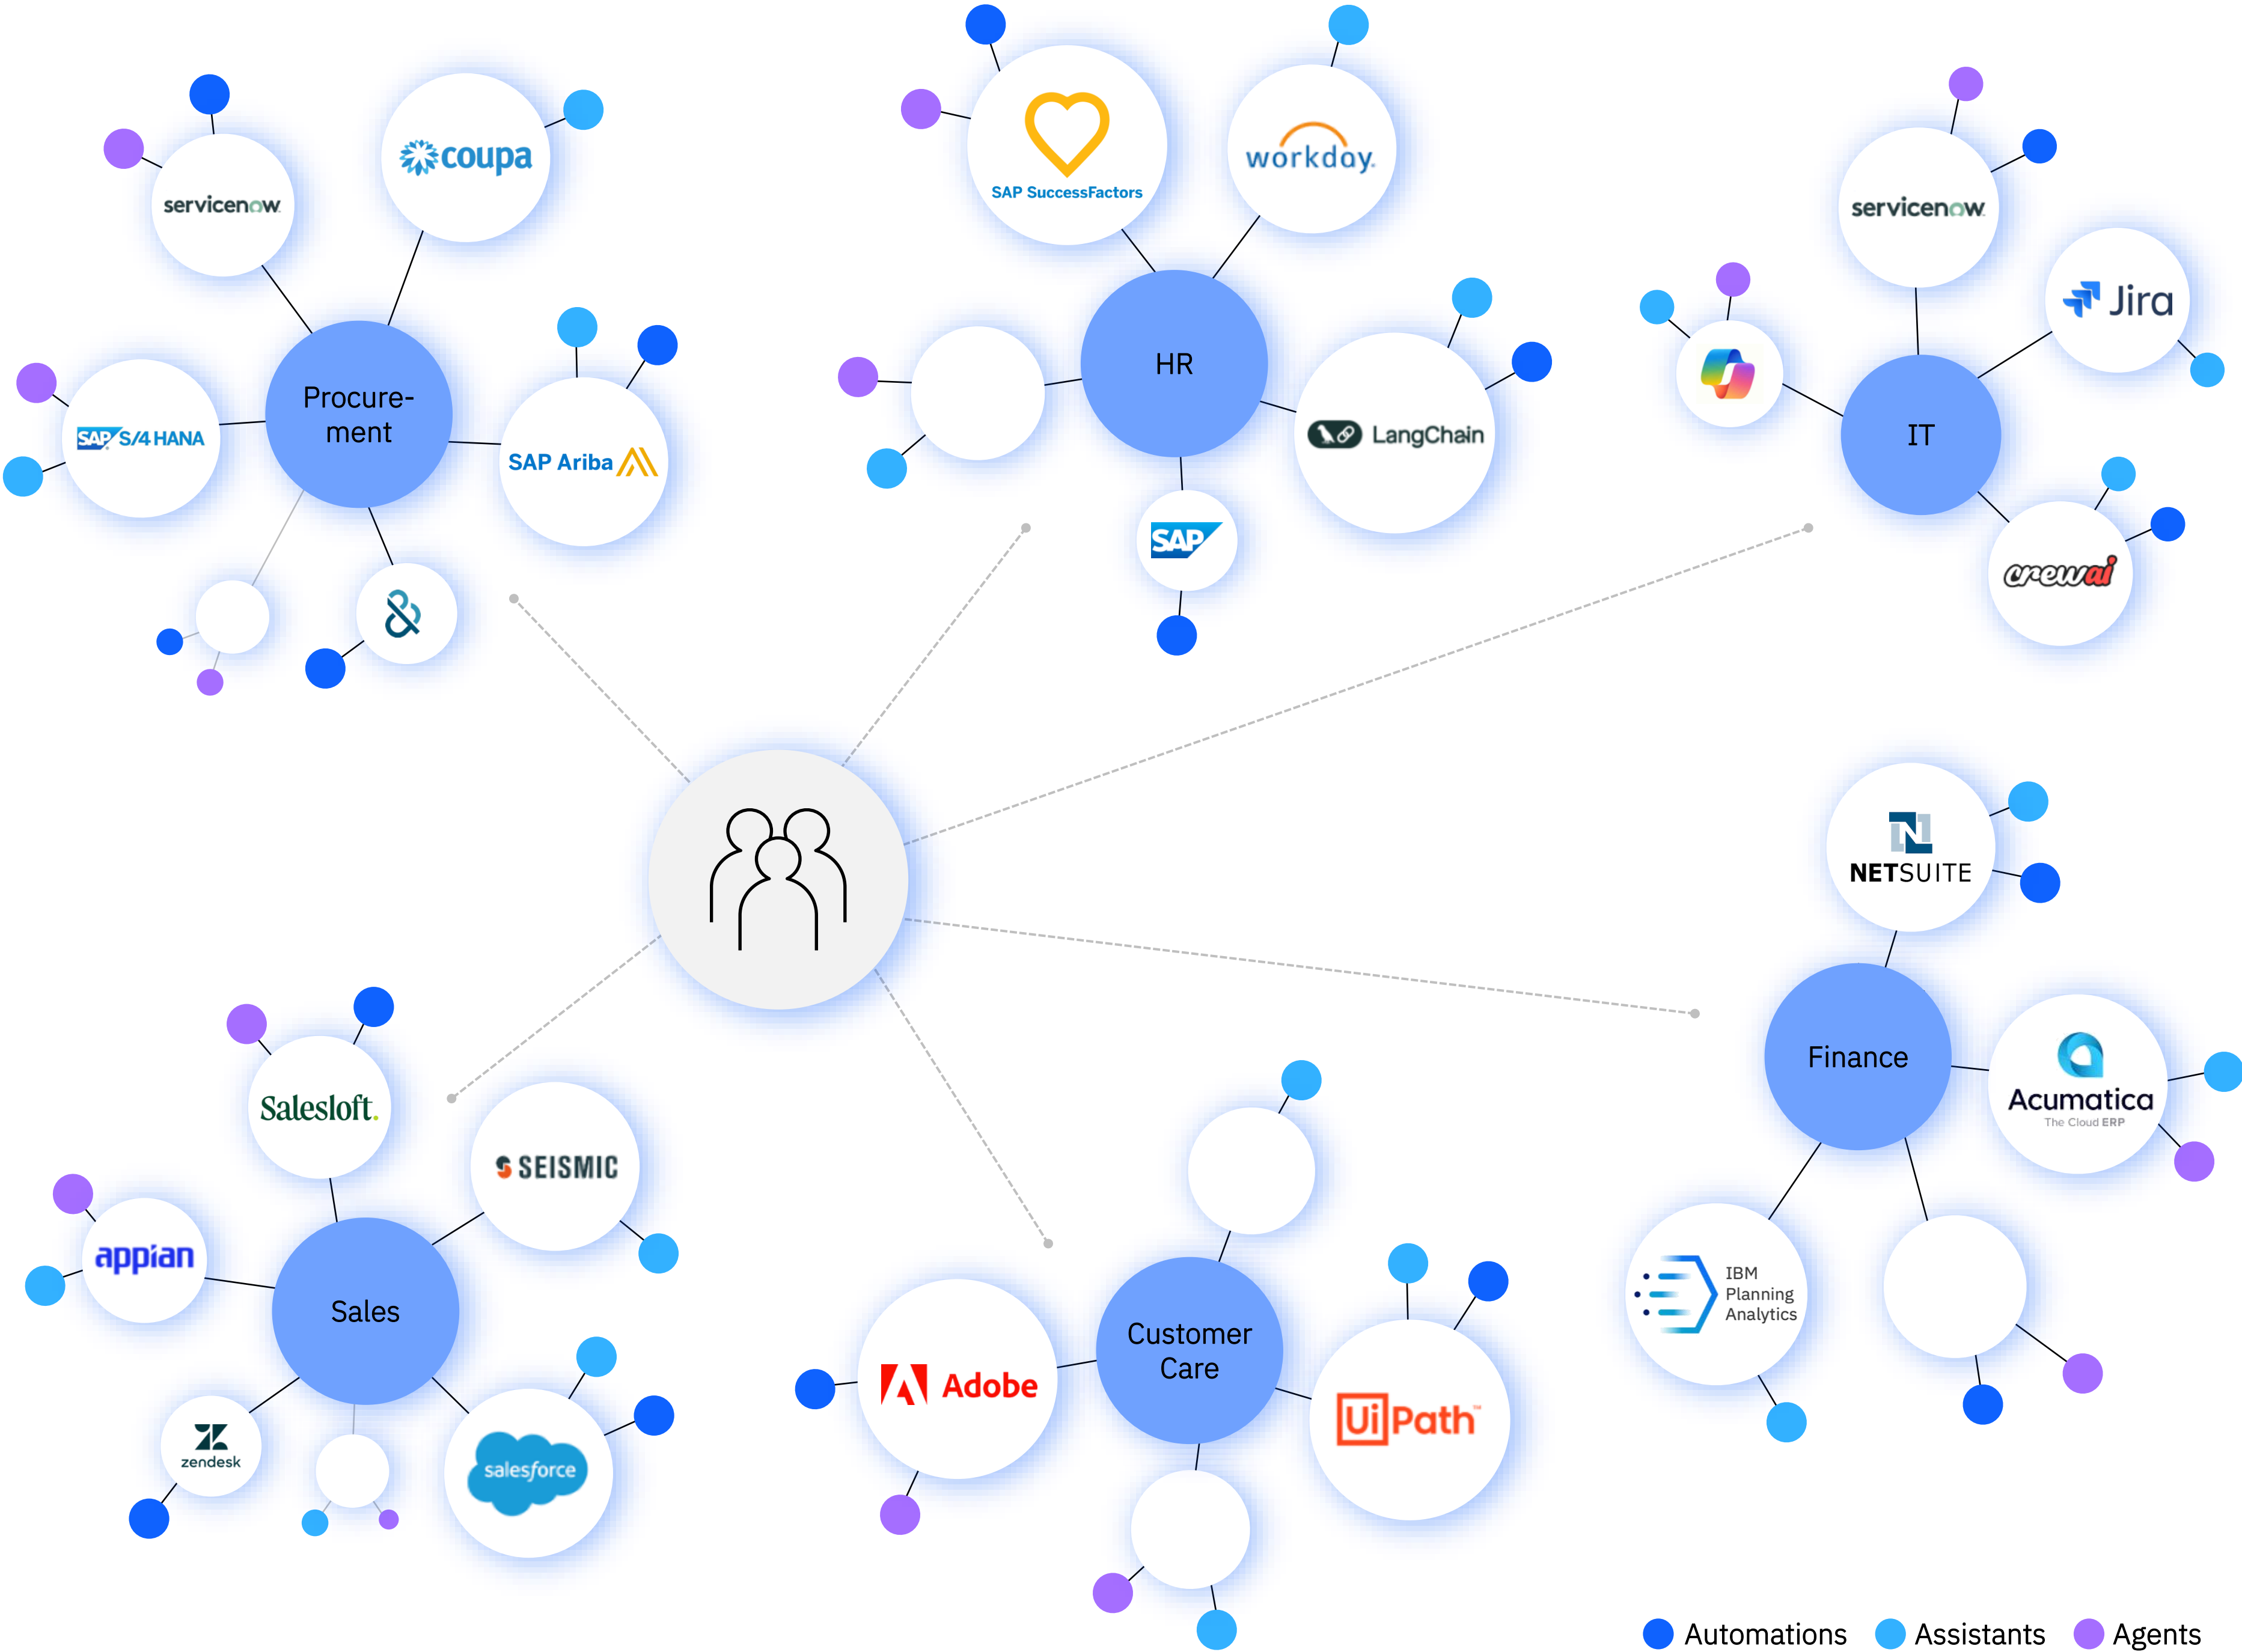

26K hours

Estimated time saved
every year for all
procurement users

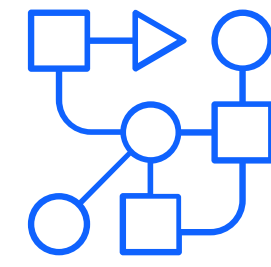

AI agents are going to be everywhere
increasing complexity

- Deployment has been siloed, creating fragmentation
- Siloed growth leads to tool overload and lower adoption
- Fragmentation hurts governance, scale and ROI

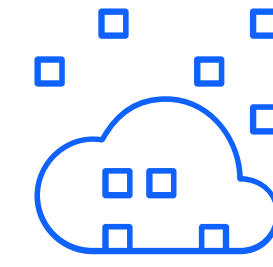

AI adoption is growing—but productivity is not

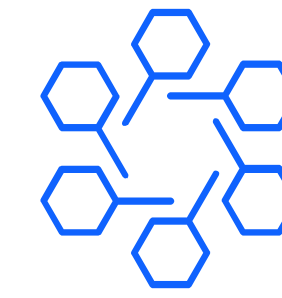

Breaking down silos

Agents and assistants are often deployed in functional silos like HR, Finance, and IT, but real business processes flow across these boundaries. Organizations struggle to connect these agents to deliver end-to-end value.

Taming agent sprawl

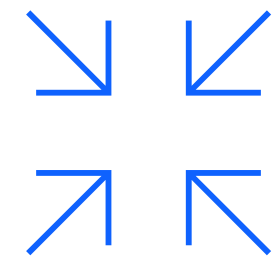

As agents and assistants multiply, managing, governing, and maintaining them becomes increasingly difficult, leading to inefficiencies and fragmented user experiences.

Bridging the production gap

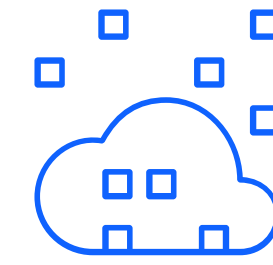

Many organizations face hurdles moving from pilot to production. Existing investments in automation often can't be leveraged by new solutions, driving up costs and delaying ROI.

How organizations are approaching AI productivity today

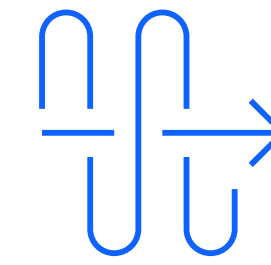

Domain specific solutions

- ✓ Provide co-pilots/ assistants as a layer on top of their platforms
- ✗ Each team ends up with its own "mini agent" that doesn't communicate or coordinate with other agents & departments
- ✗ No way to integrate existing investments in automation or custom-built assistants & assistants

Build solutions with cloud providers

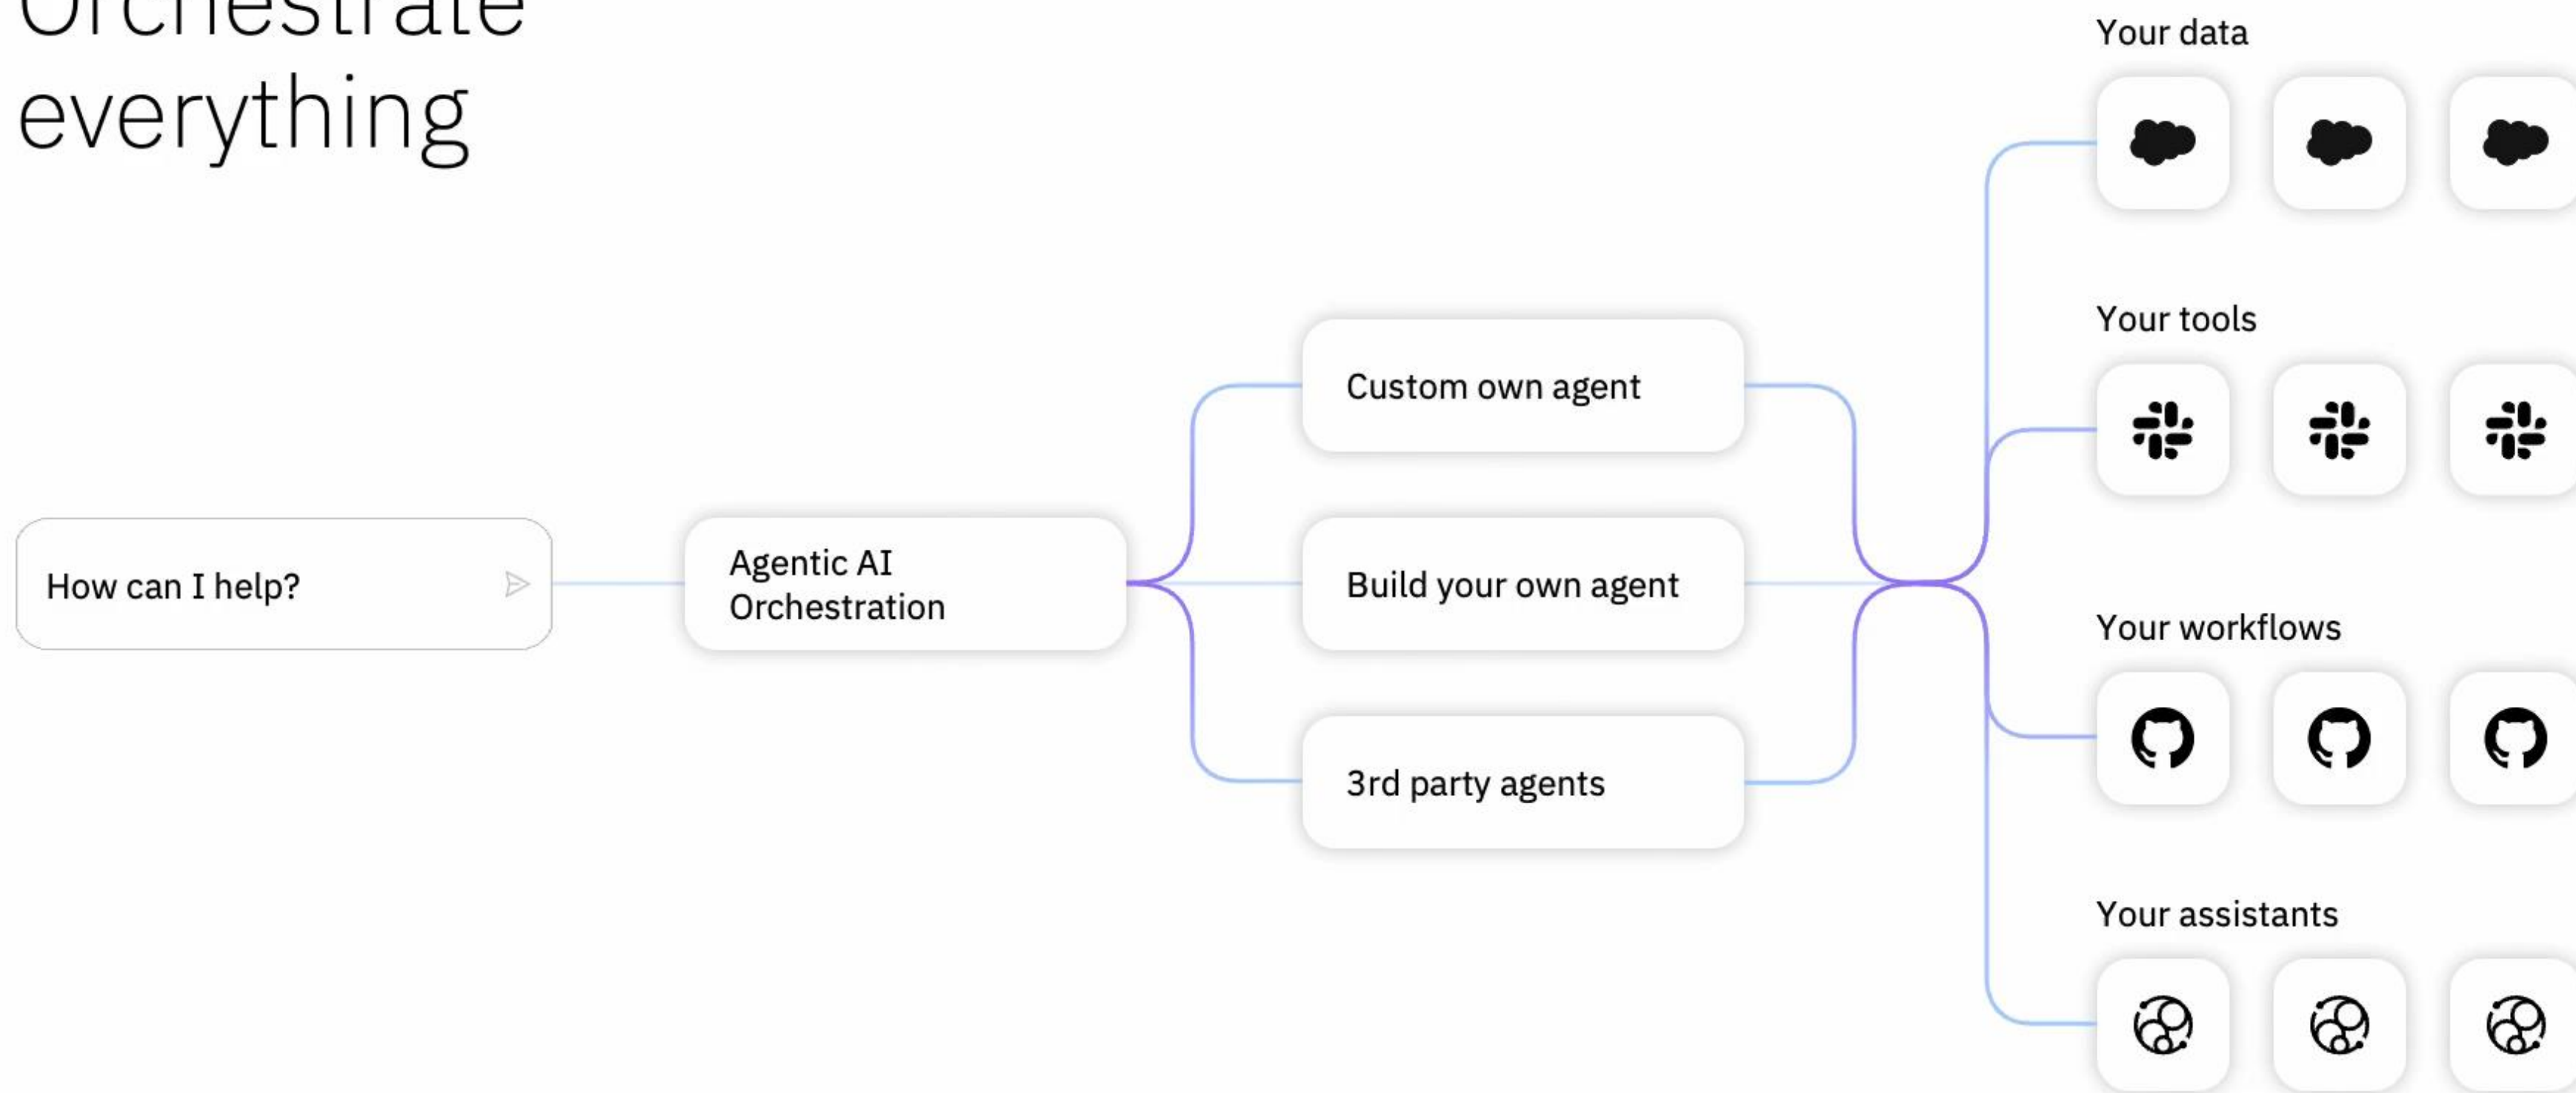

- ✓ Leverages your current cloud investments - ideal if you've standardized on a single cloud environment
- ✗ Locked into one cloud stack – leads to a lack of flexibility & interoperability
- ✗ Costly, requires deep expertise to build, slowing down innovation & time to production

Traditional Business Automation platforms

- ✓ Proven for structured, mature workflows where logic rarely changes, like approvals or routing
- ✗ Not designed for dynamic reasoning, learning from context, or operating autonomously across complex systems

Orchestrate everything

A smarter way to work is emerging

Faster time to production

Enable new ways of working by orchestrating agents across any enterprise app, data, or tech—all from a single solution

Protect and maximize your current investments

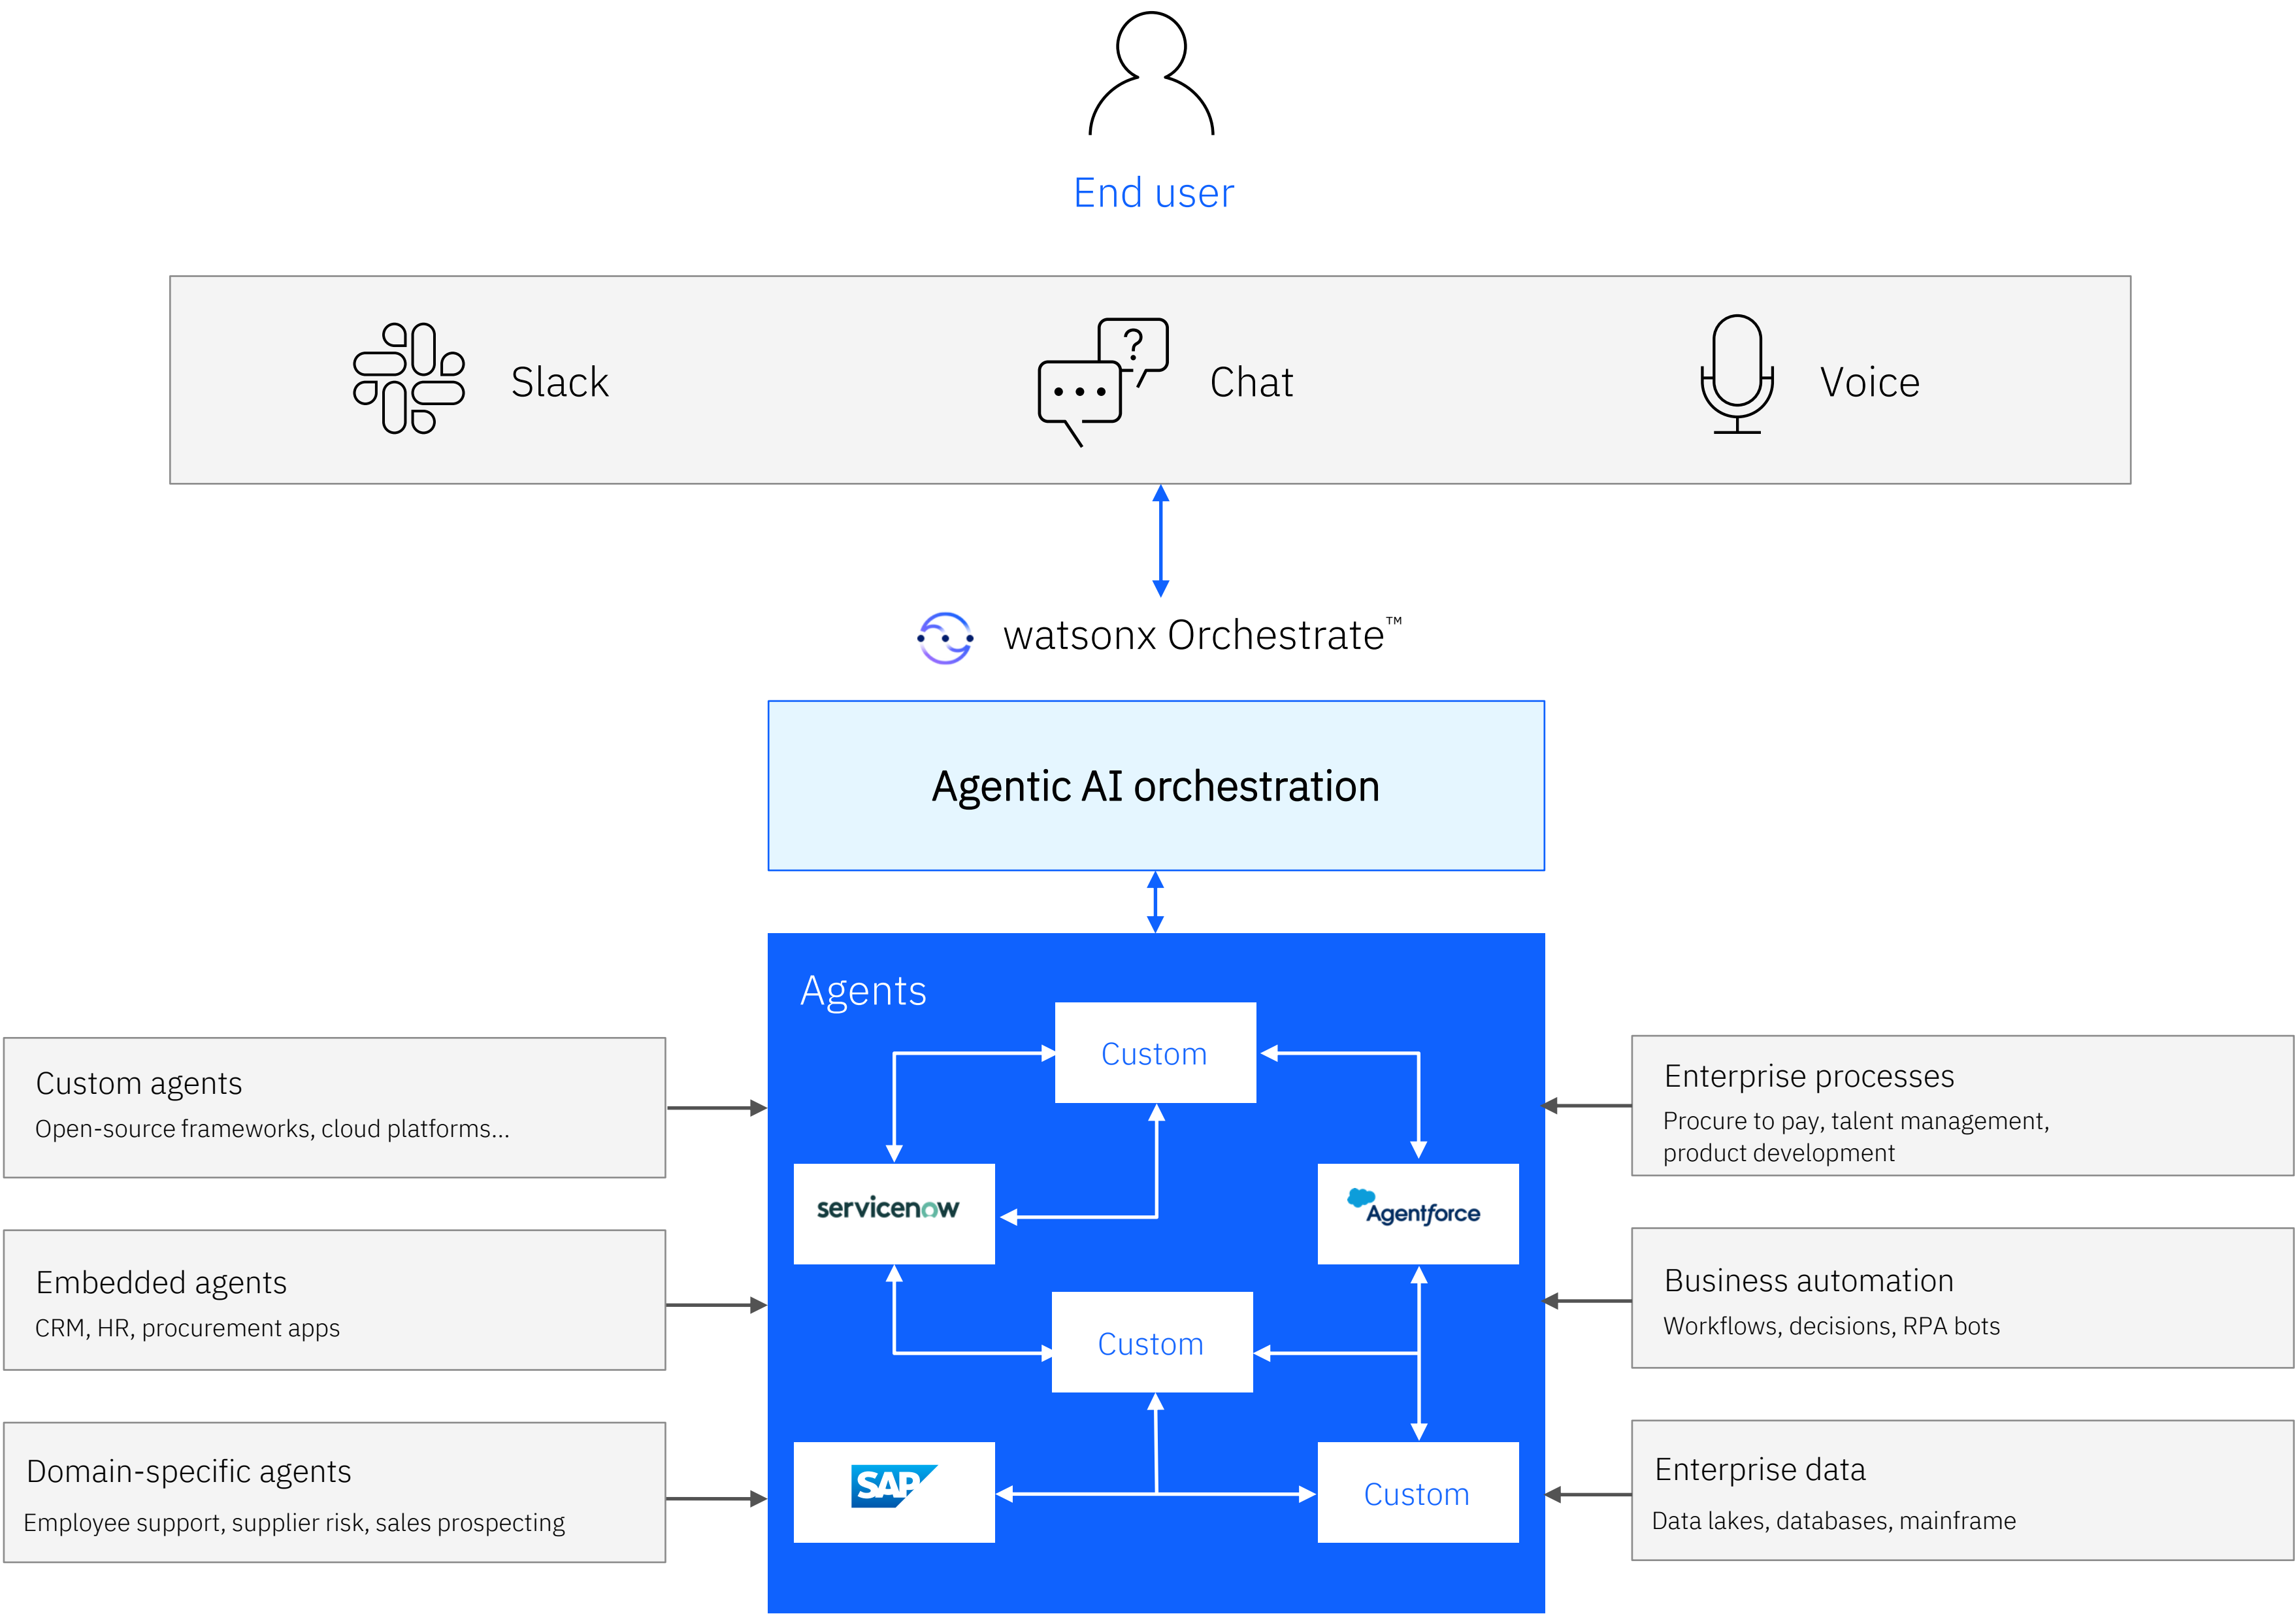

Maximize your existing investments in automation, assistants, and more

A single solution to orchestrate everything

Speed time to production by combining pre-built components and deep enterprise AI experience and expertise

Unlocking a new paradigm for putting AI to work in the enterprise

IBM watsonx Orchestrate: Agentic AI and orchestration for your business

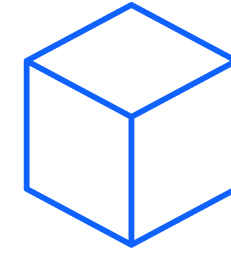

IBM's unique approach

Agentic AI Orchestration

A single solution that orchestrates work across Agents and any other data, domain & application – unlocking new ways to do work

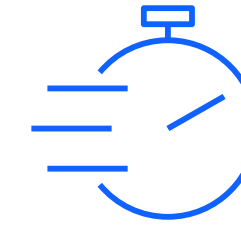

Maximize value capture for the business

Integrate 3rd party agents built in any tool or framework

Balance cost & performance by choosing the best way to execute each task

Build custom designed agents with pro-code to no-code tooling

Fast time to Production

Deploy pre-built utility agents & domain agents

Leverage our deep enterprise knowledge & expertise

Provide an easily searchable catalog of AI agents & tools

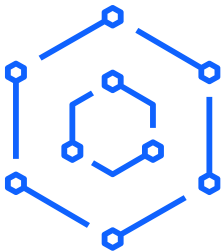

Govern & secure multi-agent systems

Govern & secure agents regardless of where they were built

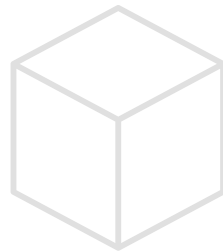

Get comprehensive, real-time insights into agent interactions & agent health

IBM's unique approach

AI Agents for Digital Labor

Conversational | Orchestrates
Contextualized | Omni-channel
Multi-cloud

Customer Care

Use cases

- Digital self-serve
- Modernize contact center
- Agent Assist
- Contact Center Insights

Business impact

- Better resolution times
- Reduced costs
- Improved NPS/CSAT
- Higher agent retention

Sales

Use cases

- Digital Prospecting
- Lead management
- Opportunity management
- Seller support

Business impact

- Higher conversion rate
- Increased order size
- Improved upselling
- Customer retention

Supply Chain

Use cases

- Sourcing Support
- Sustainability
- Supplier Management
- Inventory Management

Business impact

- Cost per order
- Lead times
- Order cycle time

Procurement

Use cases

- Procure to pay
- Contractor requisitions
- PO management
- Supplier assessment

Business impact

- Improved onboarding
- Reduced external spend
- Improved sourcing

Finance

Use cases

- Source to Pay
- Order to Cash
- Expense Management
- Auditing
- Financial Reporting

Business impact

- Cost per transaction
- Days sales outstanding
- Time to close period

HR

Use cases

- Talent Recruitment
- Onboarding
- Payroll
- Compensation
- Employee support

Business impact

- Time to offer
- Cost per hire
- Reduced support cost
- 1-click resolution rates
